THRU:	Russell B. Krohn, Region VII TATL <i>RBK</i>	TAT-07-F-01871
FROM:	Helen L. Holm, Region VII TATM	TDD #07-8612-34
SUBJECT:	American Steel - Holden, Missouri	PCS #7034

On December 18, 1986, Helen Holm, Region VII TAT; George Hess, EPA OSC; and Don Sandifer, EP&R/ENSV, went to the American Steel site in Holden, Missouri. The purpose of this visit was to repackage some motors and other materials originally from American Steel. These items were taken to farms in the Holden area by various individuals associated with the American Steel/Rose Chemical site and were later returned to the site by EPA. Most of the motors were placed in a wooden crate. The crate, plus materials too large to be placed in the crate were labeled and then placed with other American Steel properties at a warehouse on-site. Hess, Holm and Sandifer rearranged plastic sheeting to make sure all the American Steel properties were covered. They also walked through the site warehouse. Various papers were discovered and were brought out for future examination by Reuben McCullers, EPA/Toxics and Pesticides.

Holm, Hess and Sandifer arrived at the site at 1250 hours on December 18, 1986, and they left the site at 1530 hours the same day. Level C protective gear was used while working in the warehouses at the site.
